ABOUT JOHN JAMES AUDUBON

American ornithologist John James Audubon (1780- 1851) is considered one of the greatest and most recognizable American artists. His work represents one of the finest accomplishments in American Art and is also one of the most important documentations of Natural History. His drawings and watercolors of living birds and mammals are appreciated for their aesthetic beauty as well as for their scientific importance. Audubon was known as a naturalist, an explorer, a publisher, an entrepreneur, a writer and an environmentalist. His name has become synonymous with the love of birds and with the preservation of the environment.
